Art Unit: 1652

DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 07/06/2006 has been entered.
2. Claims 48, 50, 53, and 54 are pending and under consideration in this Office Action.
3. The rejection of claims 48, 50, 53, and 54 under 35 U.S.C. 112, second paragraph, as being indefinite has been withdrawn in view of applicants' extensive claim amendments and arguments filed on 02/06/2006.

Claim Rejections - 35 U.S.C. § 112, 1st Paragraph

4. The following is a quotation of the first paragraph of 35 U.S.C. 112:
The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.
5. Claims 50, 53, and 54 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Applicants' arguments filed 07/06/2006 have been acknowledged but are not persuasive.

As stated in the previous Office Action, gene elements which are not particularly described including the promoter, regulatory elements, and 5' and 3' flanking non-coding regions are essential to the function of the claimed invention since the claims recite a gene encoding a *Bacillus* wild-type alkaline serine protease. Therefore, the structure of these gene elements which applicants considers as being essential to the function of the claim are not conventional in

Art Unit: 1652

the art. There is no known or disclosed correlation between the coding region of the wild-type alkaline serine protease and the structure of the non-described promoter, regulatory elements, and 5' and 3' flanking non-coding regions of the gene. There is no additional disclosure of physical and/or chemical properties of these gene elements. In particular there is no disclosure of the nucleotide sequence and structure of the promoter, regulatory elements, and 5' and 3' flanking non-coding regions.

In view of the above considerations, one of skill in the art would not recognize that applicants were in possession of the gene elements including promoter, regulatory elements, and 5' and 3' flanking non-coding regions of the *Bacillus* wild-type alkaline serine protease.

Amending the claim to recite the plasmid expression vector or integration cassette comprising a polynucleotide encoding the recited mutant high alkaline serine protease may overcome the rejection.

Conclusion

6. No claim is allowed.
